## Working Papers

8. The Value of Personalized Recommendations: Evidence from Netflix  
(w/ Kevin Zielnicki, Aurelien Bibaut, Allen Tran, Winston Chou, Nathan Kallus); [Draft](#)  
*Short Abstract:* We estimate a choice model using viewership data at Netflix that separates the impact of recommendations from the intrinsic preferences of users. Using the model we consider counterfactuals that quantify the incremental engagement from personalized recommendations and decompose the role of effective targeting in driving the value of personalized recommendations, showing that it is most effective for mid-sized titles.
9. The Informational Role of Online Recommendations: Evidence from a Field Experiment on MovieLens  
(w/ Duarte Gonçalves, Ruoyan Kong, Daniel Kluver, Joseph Konstan); [Draft](#)  
*Revision Requested, Marketing Science*  
*Short Abstract:* We conduct a longitudinal field experiment on the movie recommendation platform MovieLens where we randomize the set of recommended movies and elicit beliefs about unseen movies. We use the data to decompose the influence that online recommendations have on consumption choices in terms of their informational and product discovery value.
10. Digital News Consumption: Evidence from Smartphone Content in the 2024 U.S. Elections  
(w/ Tevel Dekel, Rafael Jimenez-Duran, Ro'ee Levy, Lena Song); [Draft](#)  
*Short Abstract:* Using novel smartphone content data, we find that the median American consumes little election-related content with heterogeneity across individuals. Despite finding heterogeneity in election-related content across different applications, a variance decomposition exercise shows that this is largely due to differences across individuals, not the applications they use.
11. Guided Creativity: AI Intermediation for Enhancing Originality and Quality in Visual Design (w/ Xuekang Wu (first author), Artem Timoshenko); [Draft](#)  
*Short Abstract:* We explore how generative models can serve as intermediaries in facilitating high quality visual design in a logo design contest setting. Compared to traditional open or blind contests, we show that a variant of the open contest where the presented logos are generative variations leads to similar quality improvements from open compared to blind contests, but mitigates the fixation typically associated with open contests by inducing a more diverse set of designs.

## Book Chapters

12. Experiments with Social Media (w/ Rafael Jimenez-Duran, Ro'ee Levy, Lena Song); [Draft](#)
